

There are several mobile base station sites in the river

Overview

What is a river viewing service station?

Text description provided by the architects. The East-bound “River Viewing Service Station” is a series of service stations located in the public space of the eastern bank of the Huangpu River in Shanghai. The 22 stations are distributed in the entire east coast between Yangpu Bridge and Xupu Bridge.

Where did the river viewing service station project come from?

The project originated from the first River Viewing Service Station completed in September 2017 at Lujiazui northern riverside and the renovation and design of the second River Viewing Service Station completed in December 2017 in Qiantan Leisure Park.

How long does it take to build a river viewing service station?

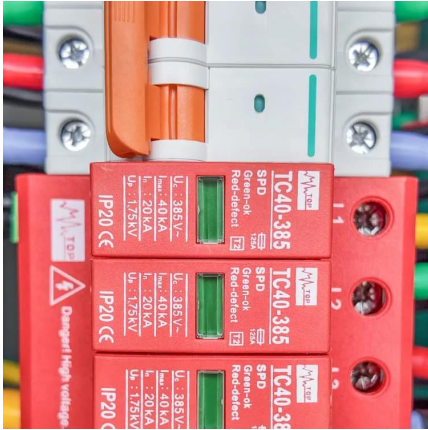

In 2018, the River Viewing Service Station will be a standard supporting facility for the East Coast in Pudong New District. As the emergency projects, the first two River Viewing Service Stations only took one and a half months in design and completion respectively.

Why do we need additional base stations?

Hence, additional base stations (BSs) may be needed to satisfy the new demand. This case addresses the application of dynamic permanent demand for service such as establishing a new residential area over several time periods where new demand clusters are created in each time period as the residential area expands.
