

Three types of solar powered water pumps

Overview

What are the different types of solar pumps?

There are several types of solar pumps, such as solar photovoltaic pump, solar thermal water pump and domestic hot water pump. Solar pumps are generally submersibles or surface, and have multiple applications, from irrigation in crop areas, drinking water systems, to installations in water projects for livestock.

What is a submersible solar pump?

Submersible Solar Pump Submersible solar pumps popularly called solar pumps for irrigation are placed underwater. These water pumps can pump water from great depths. Therefore, they are suitable for applications that require water to be lifted from deep sources. Submersible pumps require less energy to pump water from deeper depths.

What is a solar powered water pump?

A solar powered water pump is an eco-friendly, off-grid solution that uses solar energy to move water from wells, rivers, ponds, or tanks—without needing electricity or fuel. Perfect for farms, homes, and remote areas, these pumps are powered by photovoltaic panels and come in both surface and submersible options.

How do I choose the right type of solar pump?

Choosing the right type of solar pump will depend on the intended use. There are two main types of solar pumps: Submersible solar water pump: These pumps are ideal for extracting water from significant depths, such as wells or cisterns.
