

Tiles solar panel laying

Overview

Can solar panels be installed on clay-tiled roofs?

Until recently, installing solar on clay-tiled roofs has been a more expensive and risky endeavor than other roof types, like composite shingle or metal. This is because tiles are relatively expensive, fragile, and removing them to install roof mounts for solar panels can open up the seal of your roof to water damage.

How to install solar panels on a tile roof?

To install solar panels on a tile roof, first bolt aluminium-alloy brackets to the roof, then attach rails to the brackets. Next, use specially designed clips to attach the solar panels to the rails, bolting them onto the edges of the panels.

Can solar panels be installed on lightweight tiles?

If installers attempt to mount solar panels directly onto lightweight tiles, several issues can arise: Tile breakage: Walking on or drilling through these tiles can cause cracks or breaks, which may lead to roof leaks and structural damage.

Should solar panels be tilted?

If the loads are roughly equal in summer and winter, tilting the panels at latitude should be fine. In effect, however, most grid-connected solar systems are likely to be installed at whatever angle the roof happens to be tilted at (unless the roof is completely flat, in which case the panels should be given a slight tilt).
