

# **Turkmenistan Emergency Energy Storage Power Supply**

## Overview

---

How is energy used in Turkmenistan?

Total energy supply (TES) includes all the energy produced in or imported to a country, minus that which is exported or stored. It represents all the energy required to supply end users in the country.

Why is interconnectivity important in Turkmenistan?

Enhanced interconnectivity will diversify export routes, improve energy system flexibility, and support decarbonization, ultimately integrating Turkmenistan into global energy markets. Ensure access to affordable, reliable, sustainable, and modern energy for all.

What is the solar potential of Turkmenistan?

Average Theoretical Solar Potential: 4.4 kWh/m<sup>2</sup>, roughly 655 GW of additional capacity. Potential: Turkmenistan, with the world's fourth-largest natural gas reserves, is strategically positioned for hydrogen energy development, as 68% of global hydrogen production is derived from natural gas, making it the most cost-effective method.

Why should Turkmenistan upgrade the United energy system of Central Asia?

Upgrading the United Energy System of Central Asia is essential to reduce transmission losses and increase efficiency. Enhanced interconnectivity will diversify export routes, improve energy system flexibility, and support decarbonization, ultimately integrating Turkmenistan into global energy markets.
