

# Types of Tile solar

## Overview

---

What are solar tiles?

Solar tiles are roofing materials that can produce energy directly from sunlight. Solar tiles are integrated into the roof itself and function as both a roofing substance and a source of energy, as opposed to conventional solar panels, which are mounted on top of an existing roof.

What are the different types of solar tiles?

Solar Century offers three types of solar tiles: C21e Solar Slate, C21e Solar Plain tile, and C21e Solar roof tile. Each C21e PV tile has a 50Wp output, resulting in a 138 Wp output per meter square of area.

Are solar tiles a good choice?

Sometimes called 'invisible solar', solar tiles are also an excellent option for solar power upgrades to listed buildings or buildings in conservation areas. They are also fantastic for complex roofs with cross-gables, dormer windows, sloped gables, and other non-standard pitched roofs.

How do solar tiles work?

Solar tiles are integrated into the roof itself and function as both a roofing substance and a source of energy, as opposed to conventional solar panels, which are mounted on top of an existing roof. Photovoltaic cells in solar tiles turn sunlight into direct current (DC) energy.

## Types of Tile solar
