

# US Household Energy Storage Power Station

## Overview

---

How much energy is stored in the United States?

According to Wood Mackenzie, there is 83 GWh of installed energy storage capacity in the United States, including nearly 500,000 distributed storage installations. Current forecasts show that U.S. storage capacity is expected to reach 450 GWh by 2030, falling short of the capacity required to support our nation's energy needs.

How many MWh is a residential energy storage system?

The data set totals 263 MWh, and covers all or a portion of installations in 20 states and the District of Columbia. WoodMac estimated that U.S. residential energy storage installations were 540 MWh in 2020, though an exact share of the market is not calculated here due to differences in the data such as when systems are considered installed.

What's going on with residential energy storage?

Residential energy storage installations just hit an all-time high, and US grid-scale energy storage is coming on fierce. With a record-breaking 346 MW of residential storage built in Q3 2024 — a 63% increase over the previous quarter — the residential energy storage market has reached an all-time high.

What is a residential energy storage system?

A residential energy storage system isn't just about having power when you need it—it's about gaining control over how you use energy at home. Whether it's lowering bills, preparing for outages, or reducing environmental impact, these systems offer real, practical benefits.
