

Uninterruptible power supply for Nordic power

Overview

What is an uninterruptible power supply?

Uninterruptible power supplies provide power to critical loads in the event of a power failure. Unlike emergency generators, UPS systems provide power immediately, but only for a short period of a few minutes - until a backup power supply comes online or until the load completes its shutdown sequence.

What is uninterruptible power?

In larger installations, uninterruptible power is much more than a small-scale battery UPS that keeps an alarm system running for an hour or two despite a power cut. Redundancy in the form of backup power systems is not uncommon when the need is greater.

Can Puls power an uninterruptible power supply?

Currently, PULS offers two options for an uninterruptible power supply to the load in an emergency: both double-layer capacitors and lead-acid batteries can serve as energy storage in DC-UPS systems for industrial applications.

What are the requirements for power supplies and ups in critical infrastructures?

Specific requirements for power supplies and UPS systems in critical infrastructures concern reliability, robustness, and security: UPS systems ensure an uninterrupted power supply during power outages and enable an orderly shutdown of systems during prolonged outages.

Uninterruptible power supply for Nordic power

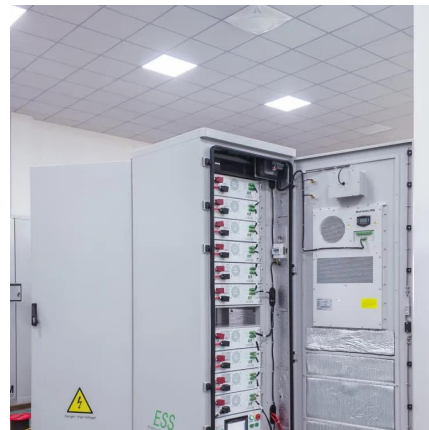

[Uninterruptible power supplies , BLOCK](#)

Uninterruptible power supplies (UPS) protect the 24 V supply voltage against unexpected power failures. In the BLOCK portfolio, capacitive UPS ...

[Data Centres & Critical Power Solutions](#)

In addition to the overall uninterruptible power supply, there is a great opportunity to look at synergies in e.g., on-call or servicing of remote system monitoring and it doesn't stop there. ...
