

# **Vietnam Off-Grid Solar Container 15MWh**

## Overview

---

Why has the Vietnamese government temporarily suspended solar projects?

To address the rapid growth and grid capacity issues, the Vietnamese government has temporarily suspended new approvals for large-scale solar projects. This measure aims to manage the grid's ability to integrate new capacity and transition from the FiT scheme to an auction-based system for project approval and pricing.

How is solar energy regulated in Vietnam?

Vietnam's solar power sector is governed by a number of key regulations and policies aimed at promoting the development of renewable energy while managing the challenges associated with rapid growth.

How much solar power does Vietnam have?

This included 16 billion kWh from solar power and 7.3 billion kWh from wind energy, according to data from Vietnam Electricity. Solar power, in particular, has seen significant expansion due to the implementation of feed-in tariffs and the increasing adoption of rooftop solar systems.

How does fit affect solar energy development in Vietnam?

FiT mechanisms set a fixed price for solar energy, overlooking regional variations in solar potential. This resulted in underdevelopment of solar PV in northern Vietnam, where solar radiation is low, while leading to overdevelopment in the south-central and southern regions, where solar radiation is high.
