

Warranty for Solar Containerized Automated Products

Overview

What is a solar contractor warranty?

Solar contractor warranties are essential to your solar energy system's overall protection. These warranties, provided by the installer, generally cover workmanship and installation issues. They ensure the solar panels are correctly installed, and the system operates as intended. The duration of contractor warranties can vary.

Why do you need a solar panel warranty?

The less solar power your system produces, the more your home may need to draw from the utility company, which eats into your savings. A good solar panel warranty ensures your solar panels maintain a certain level of performance throughout the years, protecting your expected return on investment.

How long does a solar panel warranty last?

A standard solar panel warranty should come with at least 10 years of protection, though many premium options now offer 25 or even 30+ years of coverage. Most solar panel warranties won't reimburse for labor costs associated with installing new equipment or shipping fees for replacement parts.

Are solar panels backed by manufacturer warranties?

Homeowners can trust that their solar system components are backed by the manufacturer's commitment to quality and longevity. As solar panels are a substantial investment, understanding and leveraging manufacturer warranties contribute significantly to a homeowner's confidence in the durability and reliability of their solar installation.
