

# Well-known flow battery companies

## Overview

---

What are flow batteries used for?

Flow batteries help create a more stable grid and reduce grid congestion and fill renewable energy production shortfalls for asset owners. Global R&D is fueling the development of flow battery chemistry by significantly enabling higher energy density electrodes and also extending flow battery applications.

Are flow batteries the future of energy storage?

Flow batteries, with their ability to create a more stable grid and reduce grid congestion, are considered a promising technology for energy storage. Their adoption is closely linked with the surging energy storage market and can help fill renewable energy production shortfalls.

What are the typical chemistries used in flow batteries?

Typical flow battery chemistries include all vanadium, iron-chromium, zinc-bromine, zinc-cerium, and zinc-ion. A flow battery is an electrochemical cell that converts chemical energy into electrical energy as a result of ion exchange across an ion-selective membrane that separates two liquid electrolytes stored in separate tanks.

Who makes flow battery chips?

Major Flow Battery Chip companies include: Sumitomo Electric Industries, Ltd. Sumitomo Electric Industries, Ltd., a world-class manufacturer of optical fiber cables and electric wires. The company operates through five business segments—Automotive, Electronics, Info communications, Environment and Energy, Industrial Materials, and Others.
