Do you need a power station?

In recent years, the demand for portable and reliable energy has grown rapidly. Whether you live in an urban apartment, a suburban home, or enjoy traveling off-grid, having access to electricity outside of traditional power outlets has become essential. That's where the power station comes in.

What is the difference between a power station and a generator?

Power stations and generators are often mentioned in the same breath, but they occupy very different roles in the energy chain. One is a sprawling industrial system that turns fuel or natural forces into grid power, the other is a specific machine that converts mechanical motion into electricity.

What does a power station do?

A power station is the entire system that takes in fuel or natural energy, manages combustion or conversion, handles steam or gas flows, spins turbines, houses generators, and then steps up voltage for transmission to the grid.
