

# What is the difference between 48v and 12v inverters

## Overview

---

Is 48V better than 12V?

Answer: 48v is better than 12v inverters. 48v inverters can output 4 times the amount of electricity for almost the same price as the 12v models. Also, in general 48v devices on average are a couple percentage points higher in efficiency than their 12v counterparts. Is 48V More Efficient Than 24V?

Do I need a 12V or 48V inverter?

Simply put, if you have a 12V system, you need a 12V inverter; a 48V system requires a 48V inverter. Standard Pure Sine Wave inverters simply change DC power to AC power. Inverter Chargers handle this function plus allow you to charge your batteries off shore power or a generator. Renogy's 3500W Solar Inverter Charger is designed for a 48V system.

Is a 24V inverter better than a 48V?

At 48V it drops to a more reasonable 66A. This is actually better than you might think because power loss is proportional to current squared, so if you use your existing wiring and connectors the loss in them will be 4 times higher. A 24V inverter might be a bit cheaper, but you should consider the cost of replacing your wiring and fuses etc.

What is the difference between 12V & 24V inverter?

- Difference between 12V & 24V inverter beside the power output and draw. 24V inverter you have to add extra batteries 2 at a time. 12V this is not necessary.
- The inverter is supposed to shut down at \*\* 30% SoC (state of charge), this is also indicated on the Mecer Inverter LCD.
