

# What size is a 100 watt solar panel

## Overview

---

What is a 100 watt solar panel?

A 100-watt solar panel is a solar PV module that comes with a power rating of 100W. As you'd anticipate, this means that the panel has a power output of up to a hundred watts of DC power in an hour when it's running under excellent conditions. Fundamentally, the power ratings of solar panels are evaluated under ideal conditions.

How much does a single 100-watt solar panel cost?

Each 100-watt solar panel from Topsolar is priced at just over \$100. So, the cost of a single panel is just over \$100.

What are the dimensions of standard solar panels?

Most solar panels are about 1.5 inches thick. The typical classification of solar panel sizes is based on the solar cell size, but it's not very useful for most calculations.

What can you run on a 100 watt solar panel?

A 100-watt solar panel can easily run laptop and phone chargers, ceiling fans, LED light bulbs, and DVD players. Anything bigger than that will generally require more than one 100-watt solar panel.
