

# **Where are the base station sites in Vaduz**

## Overview

---

What is a base station?

**Network Coverage:** Base stations cover a given part of the earth. Various base stations are set up in such a way that forms a network to encompass all areas of the city, region or even an entire country.

What are the different types of base stations?

Some basic types of base stations are as follows: Macro-base stations are tall towers ranging from 50 to 200 feet in height, placed at strategic locations to provide maximum coverage in a given area. Those are equipped with large towers and antennas that transmit and receive radio signals from wireless devices.

What is a C-RAN base station?

Unlike traditional base stations, where all processing is performed by separate sites, C-RAN centrally involves the cloud data center in executing the baseband process. The Mobile Switching Centers (MSCs) are one of the most important base station network, as they act as the central point for call routing and management.

What are the components of a base station?

The base station will have one or more RF antennas installed to transmit and receive RF signals from other devices. The block diagram of a base station typically includes the following key components: **Baseband Processor:** The baseband processor too deals with different communication protocols and interfaces with mobile network infrastructure.
