

Which 5G base station is better to use

Overview

Are base station antennas a key technology in the 5G era?

Base Station Antennas: Key Technology in the 5G Era – How to Choose the Right Solution?

In the rapidly evolving 5G landscape, base station antennas, as the core equipment for signal coverage, directly impact communication quality and user experience. However, many customers still face knowledge gaps when selecting antennas.

What are 5G NR base stations?

As per 3GPP specifications for 5G NR, it defines three classes for 5G NR base stations: These classes are as per cell types deployments like Macrocell, Microcell, and Pico cell. Wide Area base station: No upper limit Medium Range base station: <38dBm or 6.3 watts Local area base station: <24 dBm or 0.25 watts BS type 1-C.

Should you buy a small antenna for 5G?

Small size antennas can fill the coverage and capacity gaps. Sadly, there isn't a silver bullet when it comes to solving 5G roll out challenges. There isn't a one size fits all or a single 'best' base station option but instead operators need to be able to choose from multiple options each catering to specific use cases.

Why are 5G sites so expensive?

5G sites are expensive in terms of CAPEX and OPEX. That's why the legacy, less-expensive technologies will continue to be a big part of any cellular network. This leads to the imminent need for highly efficient passive base station antennas supporting various frequency bands, with minimal footprint and windload.
