

# Which side of the solar container lithium battery pack is the first group

## Overview

---

What is a lithium battery pack and its casing?

What's a Lithium Battery Pack and Its Casing?

A typical Li-ion battery pack consists of:

- The Enclosure: Usually split into an upper cover and a lower case (or tray).
- Li-ion Cells: The core energy storage units.
- High-Voltage (HV) Components: Connectors, busbars, etc., for power transfer.

What is the difference between battery module and battery pack?

**Battery Module:** A group of interconnected battery cells that increases voltage and capacity compared to individual cells. It includes wiring and connectors and may feature a basic battery management system (BMS) for monitoring.

**Battery Pack:** A complete energy storage system containing one or more modules.

What are battery cells & modules & packs?

Battery cells, modules, and packs are different stages in battery applications. In the battery pack, to safely and effectively manage hundreds of single battery cells, the cells are not randomly placed in the power battery shell but orderly according to modules and packages. The smallest unit is the battery cell. A group of cells can form a module.

What is the structure of a lithium battery?

The general structure of lithium batteries is a cell, battery module and battery pack. Battery cell technology is the cornerstone of battery systems. The process of assembling lithium battery cells into groups is called PACK, which can be a single battery or a battery module connected in series and parallel.

## Which side of the solar container lithium battery pack is the first gr
