

# **Will the voltage be high when three solar panels are connected in series**

## Overview

---

Why do solar panels have a series connection?

If we have two or more solar panels with equal current and power, and we want to increase the voltage, the choice falls on the series connection. By connecting multiple solar panels in series, we increase the system voltage. In a solar power system, the higher the voltage and the lower the energy losses along the cables.

Should solar panels be connected in series?

Connecting solar panels in series increases voltage while maintaining the same current level. For instance, if three panels each produce 18V and 5A, connecting them in series will yield 54V at 5A.

How to know if a solar power system has a maximum voltage?

In a solar power system, the higher the voltage and the lower the energy losses along the cables. To know the maximum system voltage, we usually just need to turn the panel and read the label, where the value is reported. After these clarifications, let's see how the series connection takes place.

Are all solar PV panels of the same type and power rating?

Here ALL the solar PV panels are of the same type and power rating. The total voltage output becomes the sum of the voltage output of each panel but the series string current is equal to the panel currents as shown.
