## Overview

---

What is a hybrid solar wind energy system?

The rising demand for renewable energy has recently spurred notable advancements in hybrid energy systems that utilize solar and wind power. The Hybrid Solar Wind Energy System (HSWES) integrates wind turbines with solar energy systems. This research project aims to develop effective modeling and control techniques for a grid-connected HSWES.

What is a hybrid energy system?

The overarching objective is to exploit the complementary nature of solar and wind resources to improve system reliability, efficiency, and sustainability. Such hybrid systems are particularly effective for remote or isolated locations where the energy grid is either unstable or unavailable.

Should solar and wind energy systems be integrated?

Despite the individual merits of solar and wind energy systems, their intermittent nature and geographical limitations have spurred interest in hybrid solutions that maximize efficiency and reliability through integrated systems.

Does a grid-tied hybrid PV/wind power system generate electricity?

In the study by Tazay et al. , a grid-tied hybrid PV/wind power generation system in the Gabel El-Zeit region, Egypt, was modeled, controlled, and evaluated. Simulation results revealed that the hybrid power system generated a total of 1509.85 GW h/year of electricity annually.
